Professional Summary

Software Engineer with 2+ years of experience developing backend systems, REST APIs, and scalable web applications using Node.js, Express.js, MongoDB, PostgreSQL, and Redis. Experienced in building AI-powered integrations, optimizing application performance, and designing reliable, high-performance solutions. Strong foundation in software engineering principles, database management, and full software development lifecycle (SDLC), with a passion for solving complex problems and delivering efficient, user-focused applications.

Experience

Software Engineer Associate (Telus International | Sept 2025 – May 2026)

- Integrated AI-powered chatbot solutions into client platforms using Node.js, Express.js, REST APIs, and **Google Cloud Platform (GCP)**, leveraging cloud services for deployment, scalability, and monitoring. Worked with AI/chatbot frameworks and backend services to enhance automation of customer queries
- Designed and implemented **conversational workflows** and **backend logic**, enhancing user engagement
- Built and maintained **API integrations with third-party services**, optimizing backend communication and reducing response latency by **~20%**
- Worked with **technologies** including Node.js, Express.js, JavaScript (ES6+), REST APIs, MongoDB, Git, GitHub, Postman, **Docker**, Redis, JWT Authentication, CI/CD pipelines, and AI/chatbot frameworks in a collaborative agile development environment.

Junior Software Developer (Solid Systems Global | Oct 2023 – Nov 2024)

- Developed and maintained **scalable web applications** and internal tools, improving overall system efficiency by optimizing frontend and backend performance
 - Designed and implemented full-stack solutions using **JavaScript**, **Node.js**, and **React.js**, delivering robust and maintainable product features.
 - Actively participated in code reviews, debugging, and performance optimization, reducing production bugs
-

Projects:

Redis-Based Distributed Rate Limiter (Node.js, Express.js, Redis, Docker)

- Designed and developed a distributed rate-limiting system using Node.js, Express.js, Redis, and REST APIs, reducing excessive API requests by over **90%** and improving application stability.
- Implemented middleware-based request throttling and IP tracking, decreasing server overload incidents by **40%** during peak traffic periods
- Implemented Redis-backed atomic counters, configurable rate-limiting windows, and middleware-based request **throttling** to ensure accurate request tracking across multiple application instances
- Containerized the application using **Docker** and optimized **Redis** key management and request processing, improving **scalability**, **maintainability**, and **deployment** efficiency.

Money Tracker Application (Node.js, Express.js, MongoDB, Mongoose, JWT, Joi, Jest)

- Developed a full-stack personal finance management application using Node.js, Express.js, MongoDB, Mongoose, and REST APIs, enabling users to securely manage income, expenses, and financial transactions.
- Implemented authentication and authorization using **JWT**, along with request validation using **Joi**, ensuring secure access control and robust data integrity across application endpoints.
- Optimized database queries and backend APIs, reducing transaction retrieval time and enhancing application performance
- Built comprehensive unit and integration tests using **Jest**, while developing financial dashboards, transaction categorization, and reporting features to enhance reliability, maintainability, and user insights.

Publications:

Kashmiri Idioms NPM [Package](#) (JavaScript, Node.js, NPM)

- Developed and published an open-source **NPM package** for generating Kashmiri idioms with meanings and usage examples, promoting regional language accessibility for developers
 - Designed a lightweight and reusable JavaScript library compatible with both **Node.js** and **React.js** applications, enabling seamless integration across diverse projects
 - Authored package documentation and usage examples, and successfully published the library on **NPM** for public use and distribution.
-

Technical Skills

Programming Languages: Java, JavaScript, Python, C++
Frontend Technologies: HTML5, CSS3, React.js
Backend Technologies: Node.js, Express.js, RESTful API Development, Middleware Development
Databases & Caching: MySQL, PostgreSQL, MongoDB, Redis
Validation and Security: Joi, JWT Authentication, Authorization Mechanisms, Input Validation, Security Best Practices
Tools & Platforms: Git, GitHub, GitHub Actions, Docker, Postman, Visual Studio Code, NPM
DevOps & CI/CD: Docker Containerization, CI/CD Pipelines, GitHub Actions, Automated Testing & Deployment

Education:

B.Tech in Computer Science (Islamic University of Science and Technology, Kashmir)
Graduated: 2022 | CGPA: 6.98
